

MyMelanoma®

You are invited to take part in the world's biggest study of
Melanoma!

What does MyMelanoma hope to achieve:

- ◆ Determine what lifestyles can affect the risk of melanoma coming back (recurrence) and what can be done about it
- ◆ Discover tests which better predict recurrence and which can be used to select the best treatment for an individual patient
- ◆ Identify what the risk of any new cancer is in families who are at an increased risk of melanoma

We need 20,000 people who have ever had a melanoma of the skin, mucosa (mouth, nose, or genitals) or under the nails, to join MyMelanoma.

We are specifically recruiting participants who are just about to start immunotherapies to treat their melanoma. We need to hear from you before you start your treatment, so please scan our QR code and sign up to join the MyMelanoma team today!
